## Notes

All dimensions in inches

Tread angle is 2 degrees 50 minutes or 2 5/6 degrees

## Tolerance

The amount by which a final measured dimension can vary from the given value is determined by the tolerance.

- + (plus) and a Value – The measured dimension may be larger by any amount up to, and including this additional value
- Max – This is the largest the measured dimension can be, any smaller value is acceptable
- Min – This is the smallest the measured dimension can be, any larger value is acceptable
- NLT Not Less Than – Similar to a minimum but the measured dimension should be as close as possible to the given dimension without being smaller than it
- NMT Not More Than – Similar to maximum but the measured dimension should be as close as possible to the given dimension without being larger than it
- Typ (typical) – Approximate dimension, exact value will have to be determined in order to make other surfaces align correctly
